PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on experience building and deploying AI-powered applications using Natural Language Processing, Computer Vision, Machine Learning, FastAPI, and Flutter. Experienced in developing end-to-end AI products from model training and evaluation to deployment and user-facing applications. Seeking AI/ML, NLP, Computer Vision, or Data Analytics internship opportunities.

TECHNICAL SKILLS

Programming Languages:

Python, SQL

Machine Learning & AI:

Machine Learning, Deep Learning, NLP, Computer Vision, Transformers, Generative AI

Libraries & Frameworks:

Scikit-Learn, PyTorch, Hugging Face Transformers, Pandas, NumPy, OpenCV, MediaPipe

Backend & Deployment:

FastAPI, REST APIs, Firebase, Git, GitHub, Hugging Face Spaces, Render

Data Analytics:

EDA, Data Cleaning, Statistical Analysis, Data Visualization

EDUCATION

B.E. Computer Science and Engineering
L.J. Institute of Engineering and Technology
CGPA: 7.8/10
Expected Graduation: Jan 2027

RELEVANT COURSEWORK

- Artificial Intelligence
- Machine Learning

- Deep Learning
- Natural Language Processing
- Computer Vision
- Data Analytics
- Database Management Systems
- Data Structures & Algorithms

PROJECTS

1. Lumina AI – Intelligent Document Processing Platform

- Developed an AI-powered document intelligence platform that transforms raw text, PDFs, and scanned documents into structured and customized outputs for students, professionals, and general users.
- Built OCR processing, document structure understanding, semantic chunking, AI summarization, and response formatting pipelines.
- Implemented Firebase authentication, daily usage tracking, API rate limiting, and cloud deployment.
- Designed a modular FastAPI backend integrated with Flutter frontend for scalable AI-powered document processing.

Technologies: Python, FastAPI, Flutter, Firebase, NLP, OCR, Hugging Face

2. AI Fitness Coach – Real-Time Pushup Analysis System

- Developed a computer vision-based fitness coaching system capable of real-time pushup counting, posture analysis, and exercise quality assessment.
- Implemented pose estimation and biomechanical angle calculations using body landmarks for movement evaluation.
- Designed performance scoring and fatigue analysis modules to provide exercise feedback.
- Built a scalable architecture intended for future personalized AI coaching and reinforcement learning integration.

Technologies: Python, OpenCV, MediaPipe, Computer Vision, Pose Estimation

3. MoodLens – Emotion & Sarcasm Detection Platform

- Fine-tuned transformer-based NLP models for multi-label emotion classification and sarcasm detection.
- Performed dataset preprocessing, threshold optimization, feature engineering, and model evaluation using Accuracy, Precision, Recall, and F1 Score.
- Developed FastAPI inference services for real-time predictions and integrated models into user-facing workflows.
- Evaluated and compared multiple transformer architectures including BERT and DeBERTa.

Technologies: Python, FastAPI, Hugging Face Transformers, DeBERTa, NLP, Deep Learning

ACHIEVEMENTS

Built and deployed multiple AI applications used by real users.

Fine-tuned transformer-based NLP models.
